NAVEEN KUMAR T

Full Stack .NET Developer | 4+ Years of Experience

9080437109 • naveenkumartse@gmail.com • nfdportfolio.netlify.app • Coimbatore, India

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 4+ years of experience designing and delivering scalable web applications, high-performance RESTful APIs, and secure backend systems across enterprise and product domains. Deep expertise in ASP.NET Core, Blazor, Angular, and MS SQL Server — with a strong track record of optimising query performance, enforcing authentication standards (OAuth 2.0 / JWT), and owning end-to-end delivery in Agile teams. Currently contributing to US-based enterprise projects at ByteForza, while actively working with Microsoft Fabric for data engineering pipelines and Power Automate for enterprise workflow automation.

SKILLS

CORE SKILLS

Languages & Frameworks: C#, ASP.NET Core, ASP.NET MVC, Blazor WebAssembly, Angular, JavaScript, TypeScript (Basic)

Backend & APIs: .NET Core Web API, RESTful APIs, Microservices, SignalR, OAuth 2.0, JWT Authentication

Database: MS SQL Server, Entity Framework Core, Stored Procedures, Views, Triggers, Query Optimization

Frontend: Blazor WebAssembly, HTML5, CSS3, Bootstrap, Razor Pages, AngularJS

Integration & AI: ML.NET (Image Moderation), Google Maps API, PayPal / Payment Gateway Integration

Tooling & Workflow: Visual Studio 2022, VS Code, Git / GitHub, Postman, SSMS, Agile Scrum

GROWING SKILLS *(Actively learning & implementing — not expert level)*

Power Apps: *Hands-on exposure — basic to intermediate canvas app development*

Power Automate: *Currently working with — building automated business workflows and cross-platform triggers*

Microsoft Fabric: *Learning and implementing — data engineering pipelines, Lakehouse, and Dataflow Gen2*

Power BI: *Currently learning — report building, datasets, and dashboard design*

Dynamics 365 F&O: *Learning and implementing — basic customization, business workflows, ERP understanding*

PROFESSIONAL EXPERIENCE

Software Engineer · ByteForza

2025 – Present | Coimbatore, India

- Contributing to US-based enterprise projects — delivering scalable backend APIs, system integrations, and full-stack features aligned to client requirements and enterprise standards.
- Working on cross-functional development tasks including API design, data workflows, and backend architecture within a fast-moving product team.
- Applying .NET Core, Web API, and SQL Server expertise to build reliable, maintainable solutions for international clients.
- Building data engineering pipelines using Microsoft Fabric — working with Lakehouse architecture, Dataflow Gen2, and data integration patterns to support enterprise reporting and analytics needs.
- Designing and implementing automated business workflows using Power Automate — connecting enterprise systems, triggering data processes, and reducing manual intervention across operational tasks.

Full Stack .NET Developer · Set Matrix

Jan 2023 – 2025 | Coimbatore, India

- Architected and delivered CMS and EMS product features using ASP.NET Core, Blazor WebAssembly, and Web API — contributing to a successful first public release, earning the Rising Star Award (Sep 2024).
- Designed and optimised SQL Server schemas, indexed stored procedures, and query execution plans — reducing average data-retrieval time by 25%.

- Implemented OAuth 2.0 and JWT authentication across all API layers, enforcing role-based access control for multi-tenant modules.
- Built microservice modules for payment processing, subscription flows, event notifications, and analytics; integrated third-party payment gateways for CMS/EMS subscription plans.
- Integrated Google Maps API for venue selection, route display, and geolocation-based filtering in the Event Management module.
- Applied ML.NET for automated image content moderation — preventing inappropriate uploads at event creation.

Software Engineer · Studio Soft Solutions

Jun 2021 – Dec 2022 | Coimbatore, India

- Progressed from production bug-fixing to owning feature development on MarketStudio — an enterprise PIM platform — using ASP.NET MVC and Angular.
- Built admin modules for digital asset management, product lifecycle stages, and multi-region product publishing pipelines.
- Optimised SQL import/export modules and bulk-operation stored procedures — improving data processing throughput and error-handling reliability.
- Implemented TDS/TCS tax calculation logic for enterprise financial modules, supporting multi-region deployment and compliance requirements.
- Integrated PayPal payment gateway — enabling subscription plans, one-time purchases, and structured order management workflows.
- Authored technical documentation and user manuals, accelerating end-user onboarding and internal knowledge transfer.

KEY PROJECTS

US Army — HMID System | *ByteForza · 2025 – 2026*

Stack: ASP.NET Core · Web API · MS SQL Server · Secure Architecture

- Problem: US Army required a secure, enterprise-grade backend system for HMID data management.
- Solution: Built secure backend APIs and scalable data-handling modules under strict enterprise compliance and quality standards; contributed to architecture decisions for reliability and long-term maintainability.
- Impact: Delivered a stable, compliant system aligned to enterprise security and integration requirements.

US Army — CRP Project | *ByteForza · 2025 – 2026*

Stack: ASP.NET Core · RESTful APIs · Workflow Integration · MS SQL Server

- Problem: Cross-system data exchange was needed in a regulated US enterprise environment.
- Solution: Developed RESTful APIs and workflow integrations for cross-system data exchange; implemented data validation layers and tested API contracts against integration and compliance requirements.
- Impact: Enabled reliable, validated data flow across enterprise systems in a regulated environment.

ARMP — Dynamics 365 F&O | *ByteForza · 2026 – 2026*

Stack: Dynamics 365 F&O · ERP Customization · Business Workflows

- Problem: Enterprise needed ERP customisation and business workflow mapping within Dynamics 365 F&O.
- Solution: Contributed with hands-on exposure to basic form customisations, data entity understanding, and ERP business workflow mapping (learning exposure — not full implementation).
- Impact: Gained foundational ERP knowledge supporting team delivery on enterprise workflow and configuration tasks.

US Client Project | *ByteForza · 2025 – Present*

Stack: ASP.NET Core · Web API · MS SQL Server · Microsoft Fabric · Power Automate

- Problem: US-based enterprise client needed scalable backend features and automated data workflows.
- Solution: Delivering backend APIs, system integrations, and full-stack features; building Fabric data pipelines and Power Automate workflows for cross-system automation.
- Impact: Actively contributing to production-grade enterprise delivery for an international client.

Affiliate Marketing Platform | *Set Matrix · 2024 – 2025*

Stack: ASP.NET Core · Blazor · Web API · SQL Server · Payment Gateway

- Problem: No trackable referral or commission system existed for the CMS/EMS product.
- Solution: Built referral tracking APIs with unique URL attribution, real-time click/conversion monitoring, and automated commission and payout calculation modules.
- Impact: Enabled end-to-end affiliate program management with live Blazor dashboards for campaign performance visibility.

Event Management System | *Set Matrix · 2024*

Stack: ASP.NET Core · Blazor · SignalR · ML.NET · Google Maps API · JWT

- Problem: Complex event lifecycle required real-time updates, content safety enforcement, and location services.
- Solution: Implemented ML.NET image moderation, SignalR for live guest check-in and event status, and Google Maps API for venue selection and routing.
- Impact: Eliminated manual content review and delivered real-time event visibility to organisers and staff.

Smart Cater — Catering Management | *Set Matrix · 2023 – 2024*

Stack: ASP.NET Core · Blazor · MS SQL Server · Canva Charts

- Problem: Catering operations were managed through disconnected spreadsheets with no centralised visibility.
- Solution: Built role-based modules (Staff / Admin / Super Admin) for booking, kitchen scheduling, and vendor management with graphical weekly/monthly insight dashboards.
- Impact: Centralised operations from booking to kitchen execution, enabling data-driven daily decision-making.

Product Information Management (PIM) System | *Studio Soft Solutions · 2021 – 2023*

Stack: ASP.NET MVC · Angular · Web API · MS SQL Server

- Problem: Enterprise required a scalable admin layer for managing multi-channel product catalogs and bulk data operations.
- Solution: Developed a PIM Admin Panel with dynamic attribute management, Excel-based bulk import/export via stored procedures, and real-time OCP Web App synchronisation.
- Impact: Streamlined product publishing workflows and significantly reduced manual catalog entry time.

EDUCATION

BSc Information Technology · Sri Krishna Arts and Science College · *2017 – 2020*

AWARDS & RECOGNITION

Rising Star Award · Set Matrix · September 2024

Recognised for outstanding contribution to the CMS "First Face" project — awarded at its successful first public release for delivery quality and measurable team impact.
